

BI Fitness is bad
news for the
competition

BI FitnessCheck

In competing for a leading market position, each gram of superfluous fat has an immediate, negative impact – a disadvantage that might not be detected in good time because of the dynamic nature of the market. That is why clever managers take precautions and keep a close eye on their business intelligence solutions to avoid unpleasant surprises such as competitors who are one step ahead.

Even if your BI landscape has scored best marks in every test so far, it might not have kept abreast with company requirements. Processes may not, or no longer, be optimally designed, and weaknesses may have developed in the quality of the data. These issues become apparent when integrating heterogeneous data sources. In such cases, BI tools from different manufacturers may give rise to unnecessarily complex requirements, or the original solutions are no longer flexible enough to meet the new conditions that determine success.

Actinium's BI FitnessCheck clearly documents your strengths and weaknesses. Its systematic analysis of factors critical for success is based on a wealth of best practice know-how, complemented by extensive experience to obtain an objective performance profile with reliable recommendations for action for your optimised BI future. Especially because the BI FitnessCheck focuses not only on technical aspects, but also on process and efficiency analytics. More specifically: Do you know where your business intelligence sometimes runs out of steam?

Five reasons to carry out the BI FitnessCheck

- Systematic analysis with best practice benchmarking
- Extensive competence and experience
- Benchmarking of effective costs using current market prices
- Data and validation check
- Flat rates for analysis and implementation
